DHAYANIDHI V

DevOps | SRE | Cloud Engineer

Phone: +91 9360410976 | Email: dhayanidhiv019@gmail.com | LinkedIn: linkedin.com/in/dhayanidhi-v

PROFESSIONAL SUMMARY

DevOps SRE Cloud Engineer with 2+ years of experience designing, automating, and operating cost-efficient, highly available distributed systems on AWS, supporting mission-critical mobile and web applications in the banking and financial-services domain. Skilled in Kubernetes (Amazon EKS), Red Hat OpenShift (ROSA), GitOps-based continuous delivery with Argo CD, and CI/CD automation using Tekton Pipelines, AWS CodePipeline, and AWS CodeBuild. Strong background in SRE practices including SLO-driven monitoring, on-call incident response, postmortems, root cause analysis, runbook authoring, and capacity planning. Proven impact in reducing AWS cloud costs by 50% ($36K/year savings), improving CI/CD pipeline performance by 50%, and eliminating manual deployment overhead through automation and platform engineering.

CERTIFICATIONS

- AWS Certified Solutions Architect - Associate
- AWS DevOps Training - Greens Technology

TECHNICAL SKILLS

Cloud (AWS): VPC, Route 53, S3, EC2, API Gateway, RDS, CloudFront, IAM, EKS, ALB, AWS Network Firewall, AWS KMS (Customer Managed Keys), CodeCommit, CodePipeline, CodeBuild, AWS Cost Explorer

Containers and Orchestration: Kubernetes, Amazon EKS, Red Hat OpenShift (ROSA), Docker

CI/CD and GitOps: Tekton Pipelines, Argo CD, AWS CodePipeline, AWS CodeBuild, Jenkins, Git, GitHub

Configuration Management: Ansible

Monitoring and Observability: CloudWatch (Logs Insights, Dashboards, CloudWatch Agent), CloudTrail, Prometheus, Grafana, Splunk, LokiStack, VUNET Monitoring, AppSentinels

Security and Compliance: Prisma Cloud, VAPT remediation, CIS benchmark compliance, audit evidence management, encryption key management

SRE Practices: SLO-driven monitoring, incident response, on-call, postmortems, root cause analysis, runbooks, capacity planning, disaster recovery

Operating Systems: Linux (Ubuntu), Windows

Other Tools: PuTTY, WinSCP

PROFESSIONAL EXPERIENCE

AWS Cloud and DevOps Engineer | Reve Cloud | Present
Client: Equitas Small Finance Bank

Supporting mission-critical banking applications, including Internet Banking and Mobile Banking platforms, with 2+ years of hands-on experience managing cloud-native workloads on AWS and OpenShift to ensure high availability, security, and consistent performance across environments.

CI/CD and GitOps Automation

- Designed, developed, and maintained 150+ CI/CD pipelines across multiple environments using AWS CodePipeline and AWS CodeBuild, enabling automated, consistent, and reliable application deployments.
- Automated CI/CD processes using Tekton Pipelines, troubleshooting pipeline failures and improving deployment reliability for microservices.
- Managed GitOps workflows with Argo CD, including application sync, drift detection, rollout monitoring, and resolving GitOps operator-related issues.
- Integrated Prisma Cloud security scanning into CI/CD pipelines to perform source code and container image vulnerability assessments, identify CIS benchmark compliance issues, and remediate security findings before deployment.

Kubernetes, OpenShift and Platform Engineering

- Performed OpenShift platform activities including cluster upgrades, operator upgrades (GitOps, Logging), DR drill execution, and cluster health checks.
- Implemented and maintained LokiStack as part of the Logging Operator upgrade (v5 to v6), improving log centralization, analysis, and observability.
- Successfully migrated Internet Banking (IB) and Mobile Banking (MB) applications across Amazon EKS and Red Hat OpenShift (ROSA) environments for Non-Production, UAT, and Production, ensuring minimal downtime and successful application validation.

- Successfully migrated the SIT environment from HCP ROSA to Classic ROSA, covering workload movement, validation, and stability checks.
- Upgraded Ubuntu server OS versions (20.04 to 22.04) with minimal downtime, validating services and dependencies after the upgrade.

AWS Infrastructure and Hosting

- Owned end-to-end AWS infrastructure, designing and maintaining VPC, EKS, EC2, RDS, ALB, and IAM across Dev, QA, and PROD environments supporting 20+ services.
- Hosted static web applications, including Selfie Loan, Credit Card, and Personal Loan portals, on Amazon S3 and delivered content globally using Amazon CloudFront (CDN), improving availability, scalability, and page load performance.

Monitoring, Observability and Reliability

- Integrated VUNET Monitoring with Amazon EKS clusters to monitor cluster health, resource utilization, and overall infrastructure performance, improving operational visibility and proactive issue detection.
- Integrated AppSentinels application monitoring to track application performance, API latency, response times, and overall service health, enabling faster root cause analysis and performance optimization.
- Designed and implemented CloudWatch dashboards for UAT and Production environments to monitor EKS cluster performance using CloudWatch Logs Insights queries.
- Installed and configured CloudWatch Agent on servers for enhanced monitoring, metric collection, and alerting.
- Troubleshot production issues and supported end-to-end DevOps operations across environments.
- Successfully performed application switchover drills from the Disaster Recovery (DR) environment to the Data Center (DC), validating application availability, failover procedures, and recovery readiness.

Cloud Cost Optimization (FinOps)

- Reduced AWS cloud costs by 50% ($36K/year savings) through continuous cost analysis and resource optimization.
- Conducted daily AWS cost reviews, created cost monitoring reports, and identified unused or underutilized resources.
- Prepared daily and monthly AWS cost reports, monitored spending trends, and collaborated with stakeholders to implement cost optimization recommendations across multiple environments.
- Performed regular AWS cost analysis using AWS Cost Explorer, CloudWatch metrics, and utilization reports to identify cost-saving opportunities and improve resource efficiency.
- Optimized cloud resource utilization by scheduling non-production environments and removing unused snapshots, unattached EBS volumes, idle load balancers, and unused Elastic IPs.

Security, Network and Compliance

- Resolved VAPT and Prisma security findings across environments.
- Performed AWS Network Firewall reconstruction and configured stateful firewall rules to securely allow required ports and application traffic, ensuring proper connectivity and security compliance.
- Migrated encryption keys to AWS Customer Managed Keys (CMKs) across required services to address C-SITE audit findings and successfully close the identified compliance points.
- Prepared audit evidence and managed security compliance audit activities, ensuring documentation, controls, and supporting artifacts were complete and readily available for audit reviews.
- Generated and maintained inventory reports for resources, clusters, applications, and environments to support operations and audits.

EDUCATION

Bachelor of Engineering (B.E.) in Electronics and Communication Engineering
University College of Engineering, Villupuram | 2023
Relevant Coursework: Completed AWS DevOps training at Greens Technology.

KEY ACHIEVEMENTS

- Reduced AWS cloud costs by 50% ($36K/year savings).
- Improved CI/CD pipeline performance by 50%.
- Built and maintained 150+ automated CI/CD pipelines, eliminating manual deployment overhead.
- Owned AWS infrastructure across Dev, QA, and PROD supporting 20+ services.
- Migrated Internet Banking and Mobile Banking applications across EKS and OpenShift (ROSA) with minimal downtime.
